Sky Way is a real revolution in the word of transport. Sky Way is the technology of high speed string transport. Remotely it resembles a railroad, because SkyWay transport also moves on rails. These rails though are like strings, strung in the air between the special supports, and on them, the reached speed is 500 kilometers per hour. Solves any transport problems. Without the destruction of the environment, for the affordable money, with a tenfold safety margin, low-cost construction and operation, with high speeds and absolute safety. Universal technology allows to create passenger, freight, intercity and long-distance transport systems. It is Sky Way that is the best solution for the creation of the intercontinental transport system. Sky Way is: > The transport is environmentally friendly: it works on electricity and reduces emissions > High level of safety: derailment and accidents are impossible > Saving resources: 2-3 times cheaper than conventional roads, 8-10 times cheaper than high-speed railways and highways > Low fares and no traffic jams on city roads > The highest speed of movement on the rails (up to 500 km/h) > Construction in remote places and seismically active zones SkyWay - Anatoliy Yunitkiy's string transport - The potential coverage of 50% of the world market of transport services - Investors become co-owners of transport technology with an estimate of \$ 400 billion USD - Access to the world market in 2018 - The minimum amount of investments
